

Hyunsik Jeon · 전현식

AI Strategy · Cross-Border Deal Sourcing · Production AI Operator

jeonhs9110@gmail.com · +82 10-4092-0628 · Seoul, Republic of Korea github.com/jeonhs9110 · portfolio-app-5ca9.vercel.app · linkedin.com/in/jeonhyunsik

AI Strategist · Cross-Border Deal Sourcing

Six years bridging Korea and the Middle East at the National Assembly and Korea's two top-tier law firms. Now using the AI I have taught myself to build automation pipelines and predictive data systems, working to minimise hallucinations and ship the best possible results. Always curious about new technologies and platforms, with one goal: bringing the future closer, faster.

Core Competencies

- **Production AI operator** — currently architecting and running seven AI projects end-to-end. Picks up new tooling fast and ships the next system with it.
 - **Cross-border deal sourcing** — six years at Lee & Ko, HMP Law, and the National Assembly bridging Korean financial institutions with Middle Eastern sovereign capital.
 - **Languages** — Native KO + EN (US K-12 through B.A., English-medium throughout). Conversational Mandarin.
-

Applied AI & Solution Architecture

AIIM — AGENTIC PLATFORM FOR GLOBAL INFLUENCER DISCOVERY

Architect & Operator · *LIVE* · 2025–present *Stack*: LangGraph, GraphRAG, FastAPI, GCP Cloud Run, Next.js

- Discovers and curates **5,300+ creators across 14 languages** on YouTube, Instagram, and TikTok. Running 24/7 — not a prototype, a live system.
- After an external-API cost incident, built a small-sample dry-run probe so heavy calls are sized first. Took monthly run-cost from “spiky” to predictable.
- Designed a unifying schema that pulls three external data sources concurrently and merges them into one decision-ready record per creator.

VACCINE DAILY — MULTI-AGENT NEWS-INTELLIGENCE PIPELINE

Vice-Leader & Architect · *IBM × RedHat top award* · 2025–2026 Stack: HDBSCAN, ChromaDB, ko-sroberta, Kiwi, FastAPI, Multi-Agent RAG

- As **Vice-Leader**, drove the team's communication and technical alignment while designing a Writer → Critic → Editor 3-agent pipeline. Every output is cross-checked against source with PASS/FAIL — moving manual fact-check work upstream into automation.
- Used clustering and embedding caches to cut redundant LLM calls and trim API spend. The same principle transfers to any large-scale retrieval system.
- Built a comparable, per-outlet view of editorial slant across 10 Korean publications so editors can see the colour of each outlet before assigning stories.

FOBO AI — 8-STAGE ML/RL PIPELINE FOR EUROPEAN FOOTBALL

Architect & Operator · *LIVE* · 2025–present Stack: PyTorch, Transformer, GAT, PPO, XGBoost, LightGBM, GCP Compute Engine

- Designed an **8-stage ML pipeline** covering 13 European leagues, serving at **<200ms** on a single e2-medium CPU.
- Transformer + graph-attention + boosting-ensemble produce a 2080-dim embedding, handed off to a PPO reinforcement-learning decision layer.
- Two-VM footprint at **~\$26/month**; Spot-GPU retraining runs ~\$0.40/cycle. Production-grade ML without a hyperscaler budget.
- The RL layer optimises **risk-adjusted return**, not raw hit-rate. A financial-alpha framework ported to structured match data.

KOKKOK GARDEN — AI-LOCALISED MULTI-REGION E-COMMERCE

Founder & Operator · *LIVE* · Mar 2026–present Stack: Next.js 16, React 19, TypeScript, Tailwind 4, AWS EC2 (ARM64) + ALB + RDS PostgreSQL 16, AWS Cognito, CloudFront, ACM, CloudTrail, Terraform IaC

- Built the full **EC2 + ALB + RDS PostgreSQL + Cognito + CloudFront** stack on AWS via Terraform IaC, migrating from a Supabase V1 to an AWS-native architecture. VPC, security groups, ACM certificates, and CloudTrail audit logs all designed and operated personally.
- Stacked **14 admin modules** on PostgreSQL row-level security so non-engineers can run catalogue, orders, and customers directly. The full catalogue is **auto-translated into 5 languages in real time** (24-hour cache), letting one codebase serve a domestic checkout flow and overseas read-only browsing.

PLAY_BALL — MULTI-AGENT BASEBALL PREDICTION (MLB · KBO · NPB)

Architect & Operator · *In build* · 2026—present *Stack*: PyTorch, XGBoost, LightGBM, PyMC (Bayesian), knowledge graph + vector search, faster-whisper, Streamlit, SQLite

- Designed and built a **9-agent pipeline** for baseball prediction: A1 Schedule → A2 Information → A3 ML Prediction → A4 Pundit → A5 Confidence → A6 Market → A7 Integration → A8 Outcome Tracking → A9 Knowledge-Graph Reasoning. FOBO AI's operating principles ported to the baseball domain.
- **A3 ML Prediction** is a 4-stage stack: hierarchical Bayesian pitcher rating → negative-binomial run model → XGBoost win/run-total → Platt calibration → conformal interval. Returns a credible interval, not a point estimate.
- **A9 Knowledge-Graph Reasoner** stores team/player relational facts extracted from Naver News as vectors, then retrieves semantically similar past contexts per game to derive home/away trend signals. Joins the A7 integration step as a fourth signal alongside ML, pundit, and market.

SYNTHETIC VIDEO — LOCAL-GENAI 9:16 VERTICAL VIDEO PIPELINE

Architect & Operator · *Shipped* · 2026 *Stack*: ComfyUI, Wan 2.2 14B, Flux schnell, PuLID, IP-Adapter, ControlNet, Florence-2, Kokoro, Whisper, Stable Audio Open

- Shipped **two 41-second vertical videos end-to-end on a local GPU**. PuLID-Flux pinned character identity, Wan 2.2 produced the video, Stable Audio Open composed the score — all stitched in ComfyUI.
- Built a **reusable template** that completes each episode in ~75–85 minutes of unattended GPU time. Swap character, storyboard, and music files to ship the next episode at the same fidelity.
- Audio normalised to **-14 LUFS**, captions burned into the video. Direct-upload-ready for YouTube Shorts, TikTok, and Reels with zero post-edit.

IMAGE FINDER — ON-DEVICE AI PHOTO SEARCH (ANDROID)

Founder & Operator · *Play Store ready* · 2026 *Stack*: React Native, Expo SDK 56, YuNet (MIT), SFace (Apache-2.0), OpenCLIP ViT-B-32 DataComp.XL (MIT), ONNX Runtime

- **Fully on-device AI photo search.** Face detection, face embedding, and image-text search all run inside the handset — nothing leaves the device.
- For launch, swapped every non-commercial-licence model (InsightFace, Apple MobileCLIP) for **MIT / Apache-2.0** equivalents personally. APK is built; only Play Console listing remains.
- For BIPA / GDPR compliance, designed the consent flow and bulk-delete features from scratch. Camera and external-storage permissions are deliberately blocked to minimise Play Console review risk.

Experience

LEE & KO (법무법인 광장) — SEOUL, KOREA

Foreign Affairs · Cross-Border Deal Coordinator · Apr 2022 – Jun 2025

- Tracked the investment agendas of the six largest sovereign wealth funds — **ADIA, Mubadala, PIF, QIA, GIC, Temasek** — on a continuous basis, aligning each fund's asset-allocation direction with live Korean deal flow.
- Pre-built the bilateral pipelines that became **the 2023 KOFIA LOI** (Korea Financial Investment Association × UAE/Singapore sovereign funds, joint-investment letter of intent) and **the 2024 SNU Dental Hospital × Mubadala Health MOU**. Agenda alignment, stakeholder mapping, and term-sheet drafts were closed before the LOI/MOU stage.
- As **Secretary-General of the Korea–Middle East Sustainable Development Forum**, ran the bilateral channel that put Korean financial leadership and Gulf sovereign capital at the same table.

HMP LAW (법무법인 총정) — SEOUL, KOREA

Foreign Affairs · Cross-Border Deal Coordinator · Jul 2020 – Apr 2022

- Led the negotiation that delivered a **direct connection between the Oman Ministry of Defense and Hyundai Rotem** for a decommissioned-tank acquisition request, advancing to Defense Acquisition Program Administration (**DAPA**) approval at last confirmed state.
- Sourced Korean EPC partners for an **LNG pipeline construction** project adjacent to an existing oil pipeline in **Iraq**, working through regional security risk and contractor risk-profile mismatches.
- Mandate lead on a **Nigerian steel-business acquisition**, sourcing fit-profile Korean acquirers; deal closed out when no domestic risk-profile match was identified.

NATIONAL ASSEMBLY OF KOREA (대한민국 국회) — SEOUL, KOREA

Grade-7 Secretary · Foreign-Affairs Liaison — Office of Rep. Kim Jung-hoon · Jul 2019 – May 2020

- Sole-coverage of the National Policy Committee (**FSC · FSS · KFTC**) audit sessions. Learned the financial-regulation frame underneath every cross-border-capital conversation in real time, on the floor.
- Led discussions on an **MOU between the National Museum of Korea and the Louvre Abu Dhabi**, securing the principal working-level contacts required to advance the MOU into subsequent negotiation stages.

- Built the **back-channel network across UAE institutions** (including Mubadala group) through the biweekly informal expat gathering at the UAE Ambassador's residence — a network that later enabled the Korea–UAE projects at Lee & Ko.
- Drafted and managed the Korean–English foreign-affairs briefs and bilateral correspondence for the office's Middle East and sovereign-fund engagements.

CONCENTRIX KOREA (APPLE ECOSYSTEM) — SEOUL, KOREA

Workforce Manager & Apple Tier-4 Senior Advisor — client: Apple · Apr 2018 – Feb 2019

- Managed the Apple APAC English-language tech-support call centre (30+ advisors) as Workforce Manager. Built the 24-hour rotation, demand forecasting, and **CSAT / AHT-based SLA framework** to Apple global-HQ standards.
 - As **Tier-4 Senior Advisor (highest level)**, handled the most complex English-language Apple technical escalations directly. First exposure to multinational service standards at production volume.
-

Education & Awards

- **IBM × RedHat AI Transformation Academy** — *Top Award* · 2025.08 – 2026.02. Capstone: Vaccine Daily multi-agent news pipeline.
- **Miami University (Ohio, USA)** — B.A. International Studies, Economic Development concentration.
- **Taejon Christian International School (TCIS)** — IB Diploma, English-medium curriculum.
- **Taegu American School (U.S. DoD School)** — High-school diploma, US K-12 English-medium education.
