PROFESSIONAL SUMMARY

Five years at the Korean National Assembly and top Korean law firms taught me to define business problems and build alignment inside complex stakeholder terrain. I now channel that instinct into leading innovation at conservative enterprises as an AI architect — where a working PoC (proof of concept) proves more than any pitch. Beyond single API calls, I combine Multi-Agent and RAG architectures and personally design end-to-end systems — from data pipeline through cloud deployment to frontend serving — to land each client's business goal as a result that actually runs.

PROJECTS

AIIM — AI Influencer Match

Hyunsik Jeon (Solo)

End-to-end cloud platform that ingests 5,300+ creators across YouTube/Instagram/TikTok in 14 languages and **ranks brand-fit via a LangGraph agentic workflow layered on GraphRAG retrieval** — returning shortlists with per-pick rationale. Runs 24/7 on GCP Cloud Run + Cloud SQL.

KOKKOK Garden — K-Beauty Multi-region E-commerce

Hyunsik Jeon (Solo)

A sustainable e-commerce designed for an administrator to keep running long after the initial build. Six core entities normalised into a Supabase schema with RLS and relational constraints; every entity has a unified `/admin` CRUD flow. KR/GL routing plus GPT-4o mini 5-language translation on one codebase.

IAMX6 — Naver Blog Automation Desktop App

Hyunsik Jeon (Solo · source private)

A viral-marketing engine for Naver blog owners. Automates neighbor requests, comment/like, and visitor replies with human-shaped behavior to push posts toward top search ranking (검색 상위 노출). Distributed as a single ~67MB portable .exe, three-layer hardened (CFF JS + V8 bytecode + Electron Fuses).

Vaccine Daily — AI News Intelligence Pipeline

Hyunsik Jeon and 2 others

Cutting-edge AI for cross-outlet reporting-tone comparison. A news-automation pipeline that systematically cuts LLM API cost by composing multiple Python libraries (HDBSCAN · ko-sroberta · Kiwi · ChromaDB cache) around GPT-4o-mini, and kills hallucinations with a Writer → Critic → Editor 3-agent system. Top Award — IBM x RedHat AI Transformation Program.

FOBO AI — European Football Prediction

Hyunsik Jeon (Solo)

A Machine Learning and Reinforcement Learning pipeline for football-match prediction. End-to-end ML system wiring PyTorch Transformer + GAT + Dixon-Coles + PPO RL + XGBoost/LightGBM into an 8-stage pipeline across 13 European leagues, hitting ~90% (ensemble) and ~95% when PPO agrees. Runs on GCP 2-VM for ~\$26/mo.

EXPERIENCE

Foreign Affairs & Administration *Former Aide · Korean National Assembly Member*

2019.07 – 2025.06

Led overseas affairs and legislative support across the Korean National Assembly, HMP Law, and Lee & Ko — five years of defining problems and building alignment in complex stakeholder settings.

Lee & Ko (Apr. 2022 – Jun. 2025)

- **Secretary-General, Korea–Middle East Sustainable Development Forum**
- 2023 — Co-hosted with the Korea Financial Investment Association: brokered high-level meetings between leaders of Korea's top 10 financial institutions and major UAE and Singaporean sovereign wealth funds.

Objective: Establish a foundation for foreign SWF co-investment into Korean blue-chip companies.

Outcome: Signed letters of intent (LOIs); subsequently matured into a standing investment-financing channel for Korean firms entering the Middle East.

- 2024 — Led negotiation of the MOU between Seoul National University Dental Hospital and MUBADALA Health (UAE).
Objective: Establish a jointly invested and operated dental hospital in the Abu Dhabi / Dubai region, and create a Middle-East market entry for adjacent Korean dental-device suppliers.
Outcome: Khalifa University — the only institution in the UAE operating a dental-residency program — now rotates its residents through SNU Dental Hospital, and SNU Dental Hospital dispatches one senior professor annually for teaching rotations.
- Administered high-level meetings and trips abroad with Korean government organizations and private entities to foster Korea–Middle East exchange.
- Maintained close working relationships with parliamentary staff to support client legislative adjustments and regulatory-relief efforts.

HMP Law (Jul. 2020 – Apr. 2022)

- 2021 — Led a Nigerian steel-business acquisition mandate.
Objective: Source a fit-profile Korean acquirer to secure the overseas steel asset.
Outcome: Could not identify a domestic acquirer whose risk profile fit the opportunity; deal was closed out.
- 2020 — Sourced a Korean EPC partner for an LNG pipeline construction project adjacent to an existing oil pipeline in Iraq.
Objective: Create a Korean contractor entry point into Middle-East infrastructure builds.
Outcome: Regional security-risk profile prevented securing a suitable Korean EPC partner; project discontinued.
- 2020 — Handled the Oman Ministry of Defense's request to acquire decommissioned Korean tanks.
Objective: Directly connect the counterparty to a Korean defense manufacturer to enable a government-to-government transaction.
Outcome: Delivered a direct connection to Hyundai Rotem; as of last confirmed state, the transaction was advancing into Defense Acquisition Program Administration (DAPA) approval.
- Managed relationships with visiting foreign dignitaries to support cooperation with Korean companies; served as Korean–English interpreter during meetings.

National Assembly of Korea (Jul. 2019 – May. 2020)

- UAE cooperation initiative — led discussions on an MOU between the National Museum of Korea and Louvre Abu Dhabi.
Objective: Establish a standing bilateral channel for cultural and cross-institutional exchange.
Outcome: Secured the principal working-level contacts required to advance the MOU into subsequent negotiation stages.
- Attended the biweekly Friday informal UAE expat gathering hosted at the UAE Ambassador's residence in Seoul.
Objective: Use a back-channel forum to pre-align bilateral cooperation agendas and build senior-level UAE networks.
Outcome: Maintained ongoing relationships with senior figures across UAE institutions (including Mubadala group) — a network that later enabled the Korea–UAE projects during my tenure at Lee & Ko.
- Researched foreign legislation applicable to Korea; requested and analyzed information and data from overseen agencies for hearings and legislative work.
- Managed foreign VIP relations and high-volume English correspondence on key occasions.

Workforce Management & Apple Advisor *Concentrix Korea*

2018.04 – 2019.02

- Managed call center attendants' schedules according to global office and client standards.
- Identified system inefficiencies and implemented process optimization for performance.
- Assisted in-call customers as a Tier 4 Senior Advisor (Highest Level) for Apple products.

EDUCATION

Miami University, USA (OH)

B.A. in International Studies (Specialization: Economic Development)

IBM x RedHat AI Transformation

AX Academy (Certificate)

SKILLS	
AI / ML Modeling	PyTorch, TensorFlow, Graph Attention Network, Transformer, PPO Reinforcement Learning, XGBoost, LightGBM, HDBSCAN
LLM · Agentic	GPT-4o / 4o-mini, Prompt Engineering, LangGraph, GraphRAG, Writer · Critic · Editor Agentic Workflow, Embeddings / Vector Search, LLM Cost Optimization
Backend · APIs	Python, FastAPI, Flask, Node.js, SQLAlchemy, WebSocket, REST API Design
Frontend	Next.js, React, TypeScript, Tailwind CSS, Framer Motion
Data · Infra	PostgreSQL, ChromaDB, Supabase, Docker Compose, Google Cloud (Cloud Run · Cloud SQL), AWS EC2, Vercel
Collection · Automation	Selenium, Puppeteer, Playwright, BeautifulSoup, YouTube Data API, Meta Graph API
